

Desire SILVER IR

Desire SILVER Interconnect Reference provides the best possible connection for any „desired“ use in home HIGH-END environment where a maximally accurate, clean and dynamic signal transfer between two devices without any loss of signal integrity is needed. The purity and amount of inner conductors, purity of conductors insulation and „special“ twisted conductors geometry help to transfer maximal information volume and reduce external interference to signal integrity dramatically and shielding secures the signal against any possible distortion coming from another electrical devices, local networks and RF units.

Desire SILVER IR has a very clean, lively and transparent express. The amount of information that it transmitted with regard to musicality is unbeatable and silver is the total reference of your stereo system.

**** Desire Silver IR is now only available on pre-order, for more info please Contact Us on side***

Burn-in period is min. 70 hours of continuous signal transmission until it achieves its full audible potential
