

Desire HYBRID

Desire HYBRID is designed to unite the best features offered by ultra pure silver and high-conductivity copper in one single cable. The result is a fast signal transfer with focus on detail, micro-dynamics, „hand in hand“ with „smoothness“ and „sovereignty“.

Desire HYBRID creates a very energetic soundstage and fits perfectly to sometimes „slow and lazy“ sounding stereo set-ups.

Burn-in period is min. 35 hours of continuous signal transmission until it achieves its full audible potential
